Microsoft and Intel Support New Reward Program From Enterprise Ethereum Alliance

The Enterprise Ethereum Alliance (EEA) and the Ethereum Foundation introduced a new rewards and recognition system for contributions made to the EEA. The rewards will be in the form of ERC-20 tokens, which will be distributed to EEA members and other contributors. These tokens can be used to access exclusive benefits and content, as well as to vote on future proposals.

Microsoft and Intel are among the early participants in the new rewards program, with Microsoft President Satya Nadella and Intel CEO Brian Krzanich both expressing support for the initiative.

The EEA hopes that the new rewards system will encourage more contributions and engagement from the blockchain community. The tokens will be based on the ERC-20 standard, which is widely used in the Ethereum ecosystem.

EEA members can earn tokens by contributing to the EEA's ongoing projects, including the development of new specifications and standards. The tokens can be used to access exclusive content, such as webinars and educational materials, as well as to participate in decision-making on future proposals.

The EEA is the first global standards organization to develop open, blockchain-based specifications for businesses and government agencies. Its members include leading companies and organizations that are working to develop and implement blockchain technologies.
