The EEA enables organizations to adopt and use Ethereum technology in their daily business operations. We empower the Ethereum ecosystem to develop new business opportunities, drive industry adoption, and learn and collaborate with one another. Our global community of members is made up of leaders, adopters, innovators, developers, and businesses that collaborate to create an open, decentralized web for the benefit of a global community.

Join us and contribute to our work!

Newly Added EEA Members

We recently welcomed the following new EEA members:

- Sollensys Corp
- KARDIA LABS JOINT STOCK COMPANY
- EthTrust

---

Adoption in Asia

OASIS Open

We have found great interest in the work of the EEA in Asia. OASIS recently cosponsored a joint event to introduce EEA members and their activities. The event was held at the OASIS headquarters in Tokyo, Japan, and was attended by 50 attendees from organizations in the region. The event was an opportunity to share information about the EEA and its work to members, and to engage with potential new members in Asia.

---

Adoption in Europe

EY and Microsoft Expand Xbox Enterprise Blockchain Platform

They have uncovered differentiated value propositions across all parties. The dream for many supply chain technologists has been a unified platform that allows for complete visibility for all parties. This allows the platform to provide a financial system of record, from contract creation to payment and reconciliation. The expanded solution reduces processing time by 99%, with 100% near real-time visibility of the supply chain. The collaboration with Microsoft provides an accelerated way to bring these solutions to market. The EEA is excited about the opportunity to work with EY and Microsoft to deliver exquisite software to humans.

---

Interoperability Testing Working Group

The EEA Interoperability Testing Working Group (ITWG) is the first port of call for testing and providing technical documentation related to interoperability in the Ethereum ecosystem. EEA members can submit interoperability proposals for testing, which are then approved and published. This ensures that developers have a reference to test against. In addition, the ITWG provides a wiki that highlights known interoperability tools and resources. Speculative implementations and proposals are also discussed with the aim of developing standards.

---

Annual Membership Meeting

The Annual Membership Meeting took place in December, where we discussed the work of the EEA, and highlighted the recent news and activities of the EEA. The meeting was well attended, with more than 100 members present. We continue to work on helping enterprises understand when the public Ethereum is a secure and decentralized platform.

Good Standards are Developed Through Collaboration

Good standards are developed through collaboration between competitive implementers and working on a common goal. In many cases, these standards also impact adoption and ecosystem development. As the year draws to an end, we find it to be a perfect time to reflect on all we are grateful for. As the EEA, we wish you and your family Happy Holidays and a wonderful New Year!
