MARCH HIGHLIGHTS 2022

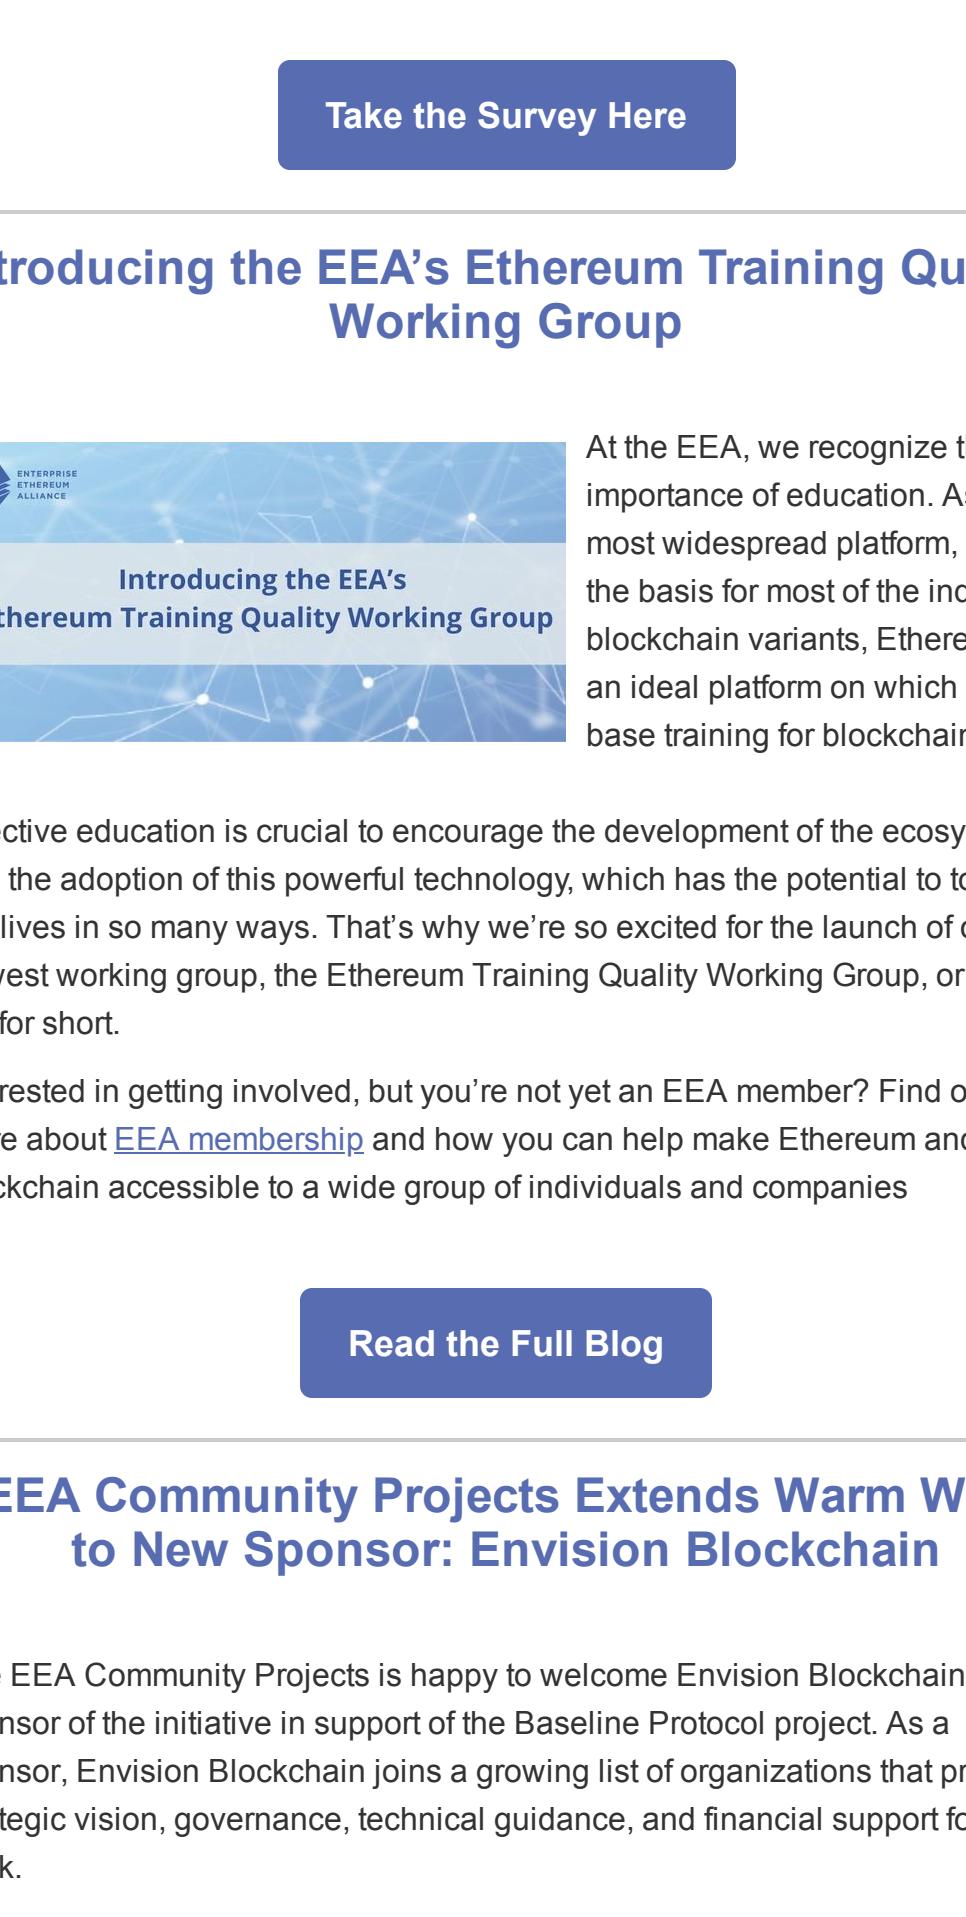

Ethereum in the Enterprise 2022:

Building and Operating on the Ethereum Network

A Conference and Product Showcase

The EEA's [Ethereum in the Enterprise Conference](#) is back for 2022. Join us on April 21, 2022 for feature presentations by some of the world's most prominent Ethereum business and technology leaders, combined with our first-ever Ethereum Product & Services Showcase. If you are interested in building and implementing Ethereum-based solutions and technologies, you don't want to miss it!

Hear from EEA Executive Director Dan Burnett About Why YOU Should Participate...

EEA Ethereum Business Readiness and Use Case Survey

Ethereum has more mainstream visibility than ever these days. Yet with the discussion focused on DeFi, NFTs, and DAOs, it's easy to lose track of the exciting developments in the use of Ethereum-enabled Web3 technologies to solve real-world business problems.

To shed light on the opportunities and challenges, the EEA is conducting an Ethereum business readiness and use case survey. Our goal is to better understand who is building on Ethereum (and related technologies), what requirements builders have, and what challenges they face. Results will be used to benefit the global Ethereum business community (for instance through our working groups) and, if you agree to it, may be included in our upcoming Ethereum Business Readiness Report.

If you have an active project, projects in the ideation phase, or even if you had a project that was shut down or never went into production, we would love to hear from you. The survey takes about 15 minutes and information will be treated anonymously. You can opt in to have your project potentially included in our public-facing reporting.

Introducing the EEA's Ethereum Training Quality Working Group

Introducing the EEA's Ethereum Training Quality Working Group

At the EEA, we recognize the importance of education. As the most widespread platform, and the basis for most of the individual blockchain variants, Ethereum is an ideal platform on which to base training for blockchain.

Effective education is crucial to encourage the development of the ecosystem and the adoption of this powerful technology, which has the potential to touch our lives in so many ways. That's why we're so excited for the launch of our newest working group, the Ethereum Training Quality Working Group, or Eth TQ for short.

Interested in getting involved, but you're not yet an EEA member? Find out more about [EEA membership](#) and how you can help make Ethereum and blockchain accessible to a wide group of individuals and companies

The EEA Community Projects Extends Warm Welcome to New Sponsor: Envision Blockchain

The EEA Community Projects is happy to welcome Envision Blockchain as a sponsor of the initiative in support of the Baseline Protocol project. As a sponsor, Envision Blockchain joins a growing list of organizations that provide strategic vision, governance, technical guidance, and financial support for the work.

Upcoming Events

EEA Education Series:

The State of DAOs and DAO Tooling

Wednesday, April 13, 2022, 12:30pm ET

Join us this month for our next Education Series Webinar, featuring **Nichanan Kesopat**, DAO operator, smart contract engineer, and author of a seminal article in 2021 on DAOs. She will provide attendees with a deep dive into the state of DAOs and the growing landscape of DAO tools and protocols.

In particular, her presentation will address the following topics:

- Overview of the different types of DAOs
- Operational verticals of a DAO and comparisons to traditional organizations
- Current tooling ecosystem
- Open questions & challenges DAOs have to overcome

Careers in Ethereum and Web 3: The EEA was excited to host its first Virtual Job Fair in conjunction with the Blockchain Education Network. The event was an exciting opportunity to connect job seekers and hiring organizations looking to help shape the future of Ethereum and Web3!

EEA Monthly Education Series: An Update on Ethereum's Transition to Proof of Stake and Other Important Network Updates: At our last EEA Education Series webinar, **Tim Beiko** and **Pooja Ranjan** provided us with an update on Ethereum's transition to Proof of Stake and other important network updates and process improvements. [Access the recording](#).

Interest Group & Working Group Updates

Once again it has been a busy month for many of our groups.

Check out their updates below!

Technical Working Group Updates

Our newest group, the **Ethereum Training Quality Working Group**, kicked off with its first two meetings, as it begins to look at what knowledge and skills the industry expects people to gain from training courses - information that will be useful to verify the quality of training offered.

We are very grateful to the Minority Programmers Association and particularly Shot K and Shadman Hossein for the drive to create this group, and Sonal Patel of ConsenSys for taking on the work of chairing the group. We wish them success as the group builds its deliverables.

The **Core Specifications Working Group** has been updating its Enterprise Ethereum Permissioned Blockchain and its QBFT Consensus Algorithm specifications, as well as some of its supporting materials, and is planning to release new work in the upcoming quarter.

The **Authority to Operate Working Group** continues its analysis of the Ethereum technology stack to determine how we can implement and build Ethereum-based blockchains for customers who want or need US Government "Authority to Operate," based on NIST standards in areas such as cryptography.

The **EthTrust Security Levels Working Group** has been processing reviews of its draft specification, which it hopes to have ready for a version 1 release in the upcoming quarter. Positive feedback and increased participation have been encouraging as we work toward that ambitious goal.

The **Crosschain Interoperability Working Group** has been developing its specifications and working with the "Layer 2" Ethereum Community project to check that their work meets the requirements of Layer 2 for an ability to provide asset transfers and call code that runs on a different blockchain.

We have put up new public pages for all the Working Groups, with a bit more information about what the group is working on, and their publicly available resources. We will also be doing this for Interest Groups over the next few weeks.

[Read the Full Blog](#)

Interest Group Updates

The **DeFi Interest Group** has proposed some new work on Risk Assessment and Management in the DeFi space, and we look forward to exploring that further.

Information on our Technical Working Groups and Interest Groups is available on our [website](#). Members can join as many groups as they wish to contribute to! Join the EEA and start to make a difference to the community and the technology. Learn more about EEA membership [here](#) and contact [James Harsh](#) to get started.

Member News

Welcome to Our Newest Members

The EEA is pleased to welcome five new members:

- [Decentralized Machines DBA PRoF Protocol](#), brings legitimacy and permanence to tokenized assets, endowing standards-compliant tokens with super-powers

- [VedasLabs.io](#), a social venture funding platform built for startup founders, mentors, and investors

- [Tron Network Ltd.](#), an ambitious project dedicated to building the infrastructure for a truly decentralized Internet

- [Blockdaemon](#), the largest independent blockchain infrastructure platform connecting institutions and developers to leading networks

- [Hacken](#), a leading security consulting company with an essential focus on blockchain security
